

Fall 2016: GEOG 1100

Exploring the World Through Google Earth

Tuesday and Thursday, 2:00 PM – 3:20 PM

This course uses Google Earth as a tool to investigate important geographic processes that are responsible for global change phenomena. Self-guided labs will use Google Earth to analyze datasets related to physical and human geography. This is a great class for anyone interested in environmental issues, environmental changes at regional and global scales, and interactions between humans and the environment. This class fulfills the physical/life science exploration (SF) requirement.
